

I would like to voice a strong objection to allowing Broadband over Power Lines (BPL) transmission. As an amateur radio operator and electronics engineer, I believe that sweep transmissions in the HF spectrum over unsheilded power lines will result in tremendous interference to many communications services which currently utilize this spectrum. The most important issue is that the power lines are not sheilded, and will most certainly radiate RF at fundamental as well as harmonic frequencies. I urge the Commission to deny any such petitions for BPL operations at HF frequencies.
